

SAP ABAP Leave Management System

**Developed By:
Hrishika Sankar TV**

Technologies Used

- SAP ABAP
- Open SQL
- SAP Dictionary (DDIC)
- Classical Reports

Overview

The Leave Management System is a desktop-based SAP ABAP application developed to simplify employee leave management. The system enables employees to submit leave requests while allowing administrators to approve, reject, or cancel them. It automatically updates leave balances and provides reports for tracking leave information.

Objectives

- Automate leave application processing.
- Maintain employee leave balances.
- Reduce manual errors.
- Provide leave approval and rejection functionality.
- Generate leave reports.
- Improve leave tracking

Features

Report / Module	Description
ZEMP_SEARCH_HRI	Searches for an employee using Employee ID and displays employee details such as name and department.
ZEMP_DISPLAY_HRI	Displays all employee records maintained in the Employee Master table
ZLEAVE_APPLY_HR	Allows employees to submit annual or sick leave requests with validation of leave details.
ZLEAVE_APPROVE_HRI	Approves pending leave requests and automatically updates the employee's leave balance.
ZLEAVE_REJECT_HRI	Rejects pending leave requests without affecting the employee's leave balance.
ZLEAVE_CANCEL_HRI	Cancels previously approved leave requests and restores the corresponding leave balance
ZLEAVE_REQST_DELETE_HRI	Deletes leave requests when required (for example, erroneous or duplicate requests).
ZLEAVE_DISPLAY_HRI	Displays all leave requests along with their current status and details.
ZLEAVE_HISTORY_HRI	Displays the complete leave history of a selected employee, including approved, rejected, cancelled, and pending requests.
ZEMP_LEAVE_SUMMARY_HRI	Displays an employee's total annual and sick leaves, used leaves, and remaining leave balance.
ZLEAVE_DASHBOARD_HRI	Provides an overall dashboard summarizing leave requests, approvals, rejections, cancellations, and employee leave statistics.

Technologies Used

Technology	Purpose
SAP ABAP	Backend development
Open SQL	Database operations
SAP Dictionary	Tables, Domains, Data Elements
SE11	Database design
SE38	Report development
SE16N	Data maintenance and verification

Database Tables

1. Employee Master

Table Name: ZEMP_MASTER_HRI

Stores:

- Employee ID
- Employee Name
- Department

2. Leave Balance

Table Name: ZEMP_LEAVEBAL_HR

Stores:

- | | |
|-----------------------|------------------------|
| • Employee ID | • Annual Leave Balance |
| • Total Annual Leaves | • Total Sick Leaves |
| • Annual Leaves Used | • Sick Leaves Used |
| | • Sick Leave Balance |

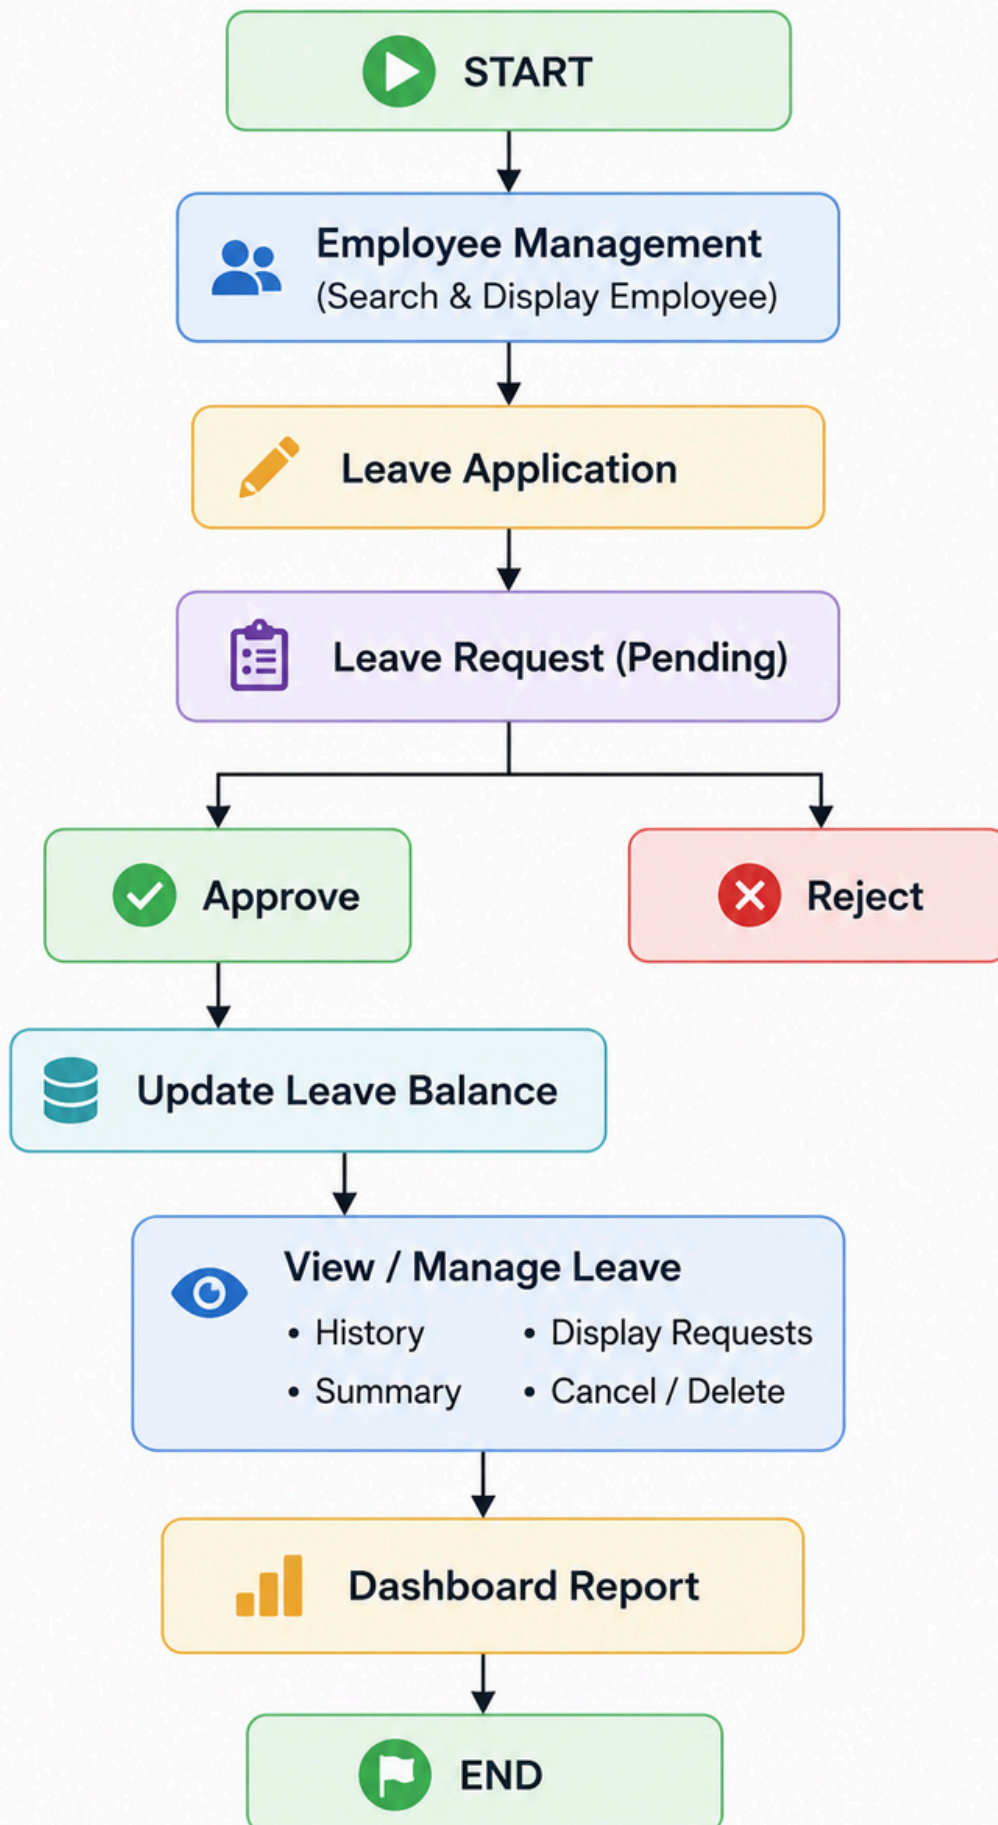

3. Leave Request

Table Name: ZEMP_LEAVEBAL_HR

Stores:

- | | |
|---------------|--------------|
| • Request ID | • To Date |
| • Employee ID | • Leave Days |
| • Leave Type | • Status |
| • From Date | • Created On |

Workflow

Future Enhancements

- ALV Reports
- User Authentication
- Role-Based Access
- SAP Fiori Interface
- Email Notifications
- CDS Views
- OOP-based ABAP implementation

Conclusion

The Leave Management System was developed using SAP ABAP to automate leave-related activities. The project demonstrates the use of SAP Dictionary objects, Open SQL, and Classical Reports to manage employee leave data efficiently. It provides a complete workflow from leave application to approval, rejection, cancellation, balance management, and reporting.
